

## ASSAYS UP TO 997 G/T SILVER, 28 G/T GOLD TARGET 1 EXPANSION

### HIGHLIGHTS

Mithril Silver and Gold Limited ("Mithril" or "the Company") (MTH:ASX) announces further drill results for the Target 1 resource expansion programme at its Copalquin District project, Mexico.

- 4.60 m @ 5.51 g/t gold, 182.4 g/t silver, from 99m (CDH-162), including
  - 2.40m @ 10.24 g/t gold, 335 g/t silver, from 100.40m, Including
  - 0.60m @ 28.0 g/t gold, 997 g/t silver, from 100.40m

CDH-162 was part of the first drilling into an area **shallower** than the maiden resource model, at the **historic El Refugio** mine workings on the western side of the Target 1 resource area.

- 9.00m @ 2.06 g/t gold, 90.26 g/t silver, from 98m (CDH-161)
  - Including 1.00m @ 2.14 g/t gold, 259 g/t silver from 99m plus
- 1.60m @ 5.09 g/t gold, 299 g/t silver from 125.60m including
  - 0.50m @ 12.15 g/t gold, 758 g/t silver from 126.7m

CDH-161 was drilled at **El Cometa** on the eastern side of the Target 1 resource area, again adding to the expanded resource footprint. The recent **33.00m @31.8 g/t gold, 274 g/t silver from surface (CDH-159)** was drilled into a shallower and parallel structure **100 metres west of CDH-161** (see Figure 2). Further drilling will be completed in this area ahead of the scheduled Target 1 resource update Q1 2025.

### John Skeet, Mithril's Managing Director and CEO commented:

*"Drilling into untested areas in and around the Target 1 maiden resource area continues to successfully expand the footprint with high to exceptionally high grade results, as we progress our aim to double the resource at this first of multiple targets in the district with a further 5,000m of drilling to complete over the coming months. Ongoing LiDAR survey interpretation, together with mapping and drill/channel sample results, further demonstrate a very large epithermal gold-silver system with significant depth potential across this 10 km wide district. There are at least three further Target 1 size areas for future drilling plus several areas identified for field work. Our Copalquin District property is advancing to become the next of the many world-class gold-silver districts in Mexico's prolific Sierra Madre Gold-Silver Trend."*

### COPALQUIN GOLD-SILVER DISTRICT, MEXICO

With 100 historic underground gold-silver mines and workings plus 198 surface workings/pits throughout 70km<sup>2</sup> of mining concession area, Copalquin is an entire mining district with high-grade exploration results and a maiden JORC resource. To date there are several target areas in the district with one already hosting a high-grade gold-silver **JORC resource at El Refugio (529koz AuEq @6.81 g/t AuEq)**<sup>1</sup> supported by a **conceptional underground mining study** completed on the maiden resource in early 2022 (see [ASX announcement 28 February 2022](#) and **metallurgical test work** (see [ASX Announcement 24 February 2024](#)). There is considerable strike and depth potential to increase the resource at El Refugio and at other target areas across the district, plus the underlying geologic system that is responsible for the widespread gold-silver mineralisation.

With the district-wide gold and silver occurrences and rapid exploration success, it is clear the Copalquin District is developing into another significant gold-silver district like the many other districts in this prolific Sierra Madre Gold-Silver Trend of Mexico. These districts can host 1 – 5 million ounces of gold plus 50 – 100+ million ounces of silver.

<sup>1</sup> see 'About Copalquin Gold Silver Project' section for JORC MRE details and AuEq. calculation.

## Drillhole Discussion

A total of 4,881.50 metres have been drilled since June 2024, testing Soledad, Cometa and Refugio to better define dimensions along strike and depth of the mineral evidence that already has shown exceptional silver and gold potential and multi-event quartz deposition. Additionally, the first drill holes at the historic Copalquin mine, 300m lower elevation and 900m SE of the Target 1 area, has provided evidence of an epithermal, multi-phase banded quartz vein, interpreted to be part of the conduit system responsible for the widespread gold-silver mineralization throughout the district and supporting our model of a large and long lived epithermal gold-silver system.

**CDH-161 intersected 9.00m @ 2.06 g/t gold, 90.26 g/t silver, from 98m, including**

**1.00m @ 2.14 g/t gold, 259 g/t silver from 99m plus**

**1.60m @ 5.09 g/t gold, 299 g/t silver from 125.60m including**

**0.50m @ 12.15 g/t gold, 758 g/t silver from 126.7m**

In order to establish the vertical and horizontal continuity of **Cometa Zone** (Refugio E-W Structure and crosscutting of NW structures) drill testing at depth and along strike of both **CDH-159** (33.00m @31.8 g/t gold, 274 g/t silver from surface) and **CDH-161** is planned over the coming months.

After completion of detailed mapping and sampling in the underground workings at El Cometa, we can now say that Fault/Breccias and Fault/Veins along drift are occurring both as high and low angle structures. There is a dominant 220-250 degree oriented, 50-70 degree angle SE structure offset by a NW structure that has been developed with channel sample assays pending. Drilling is the follow in this area.

**CDH-162 intersected 4.60 m @ 5.51 g/t gold, 182.43 g/t silver, from 99m, including**

**2.40m @ 10.24 gold g/t gold, 335.03 g/t silver, from 100.40m, plus including**

**0.60m @ 28 gold g/t gold, 997 g/t silver, from 100.40m**

**CDH-164 intersected 6.80 m @ 0.70 g/t Au, 36.98 g/t silver, from 87.20m, Including**

**4m @ 0.93 gold g/t gold, 45.83 g/t silver, from 88m, plus Including**

**0.60m @ 28 gold g/t gold, 997 g/t silver, from 100.40m**

**CDH-162, CDH-163 and CDH-164** were drilled in Refugio historic workings shallower than the maiden resource. A wide quartz breccia zone was intercept along a hydrothermal breccia in all holes. **CDH-162** hit Refugio Structure 4.60m @ 5.51 g/t Au, 182.43 g/t Ag, from 99m. **CDH-163** hit the El Refugio historic workings from 86.60m to 88.30m returning with anomalous intercepts of 2.70m @ 0.28 g/t Au, 19.28 g/t Ag from 88.30m, CDH-164 also hit a breccia zone intercepting 6.80m @ 0.70 g/t Au, 36.98 g/t Ag from 87.20m, including 4m @ 0.93 g/t Au, 45.83 g/t Ag, from 88.00 m

**CDH-165 and CDH-166** both holes were drilled on the western margin to provide geological information to support the development of the geological model. No reportable intercepts from these exploration holes.

Drilling is scheduled to recommence for the second half of the 9,000m program, late this month.

Figure 1 Cross-section at the historic El Refugio mine workings where the first drilling has been recently completed (CDH-162 to 164).

Figure 2 Plan view of drilling at El Cometa in the eastern side of the Target 1 resource area showing the recent drill intercepts into two separate and parallel structures 100m apart. Further drilling is planned to establish the continuity the mineralisation in this area.

Figure 3 Central area around the Target 1 Maiden JORC resource area, where all the drilling to date has been completed.

## ENVIRONMENTAL, SOCIAL AND GOVERNANCE

The Company philosophy operating in the Copalquin district is to support communities via children's education and providing employment opportunities. This includes supporting community schools in the district, employing twenty people from within the district under the federal employment laws, supporting routine medical visits and developing infrastructure in the district for long term benefit. This includes the municipal access road, connecting to the township of El Durazno 12 km east of the Copalquin District, with support for the municipal upgrade works scheduled for commencement in Q3 2024.

## ABOUT THE COPALQUIN GOLD SILVER PROJECT

The Copalquin mining district is located in Durango State, Mexico and covers an entire mining district of 70km<sup>2</sup> containing several dozen historic gold and silver mines and workings, ten of which had notable production. The district is within the Sierra Madre Gold Silver Trend which extends north-south along the western side of Mexico and hosts many world-class gold and silver deposits.

Multiple mineralisation events, young intrusives thought to be system-driving heat sources, widespread alteration together with extensive surface vein exposures and dozens of historic mine workings, identify the Copalquin mining district as a major epithermal centre for Gold and Silver.

Within 15 months of drilling in the Copalquin District, Mithril delivered a maiden JORC mineral resource estimate demonstrating the high-grade gold and silver resource potential for the district. This maiden resource is detailed below (see [ASX release 17 November 2021](#))<sup>^</sup>.

- **2,416,000 tonnes @ 4.80 g/t gold, 141 g/t silver for 373,000 oz gold plus 10,953,000 oz silver (Total 529,000 oz AuEq\*) using a cut-off grade of 2.0 g/t AuEq\***
- **28.6% of the resource tonnage is classified as indicated**

*Table 1 - Mineral resource estimate El Refugio – La Soledad using a cut-off grade of 2.0 g/t AuEq\**

\* The gold equivalent (AuEq.) values are determined from gold and silver values and assume the following: AuEq. = gold equivalent calculated using and gold:silver price ratio of 70:1. That is, 70 g/t silver = 1 g/t gold. The metal prices used to determine the 70:1 ratio are the cumulative average prices for 2021: gold USD1,798.34 and silver: USD25.32 (actual is 71:1) from kitco.com. Metallurgical recoveries are assumed to be approximately equal for both gold and silver at this early stage. Actual metallurgical recoveries from test work to date are 96% and 91% for gold and silver, respectively. In the Company's opinion there is reasonable potential for both gold and silver to be extracted and sold. Actual metal prices have not been used in resource estimate, only the price ratio for the AuEq reporting.

<sup>^</sup> The information in this report that relates to Mineral Resources or Ore Reserves is based on information provided in the following ASX announcement: 17 Nov 2021 - MAIDEN JORC RESOURCE 529,000 OUNCES @ 6.81G/T (AuEq\*), which includes the full JORC MRE report, also available on the Mithril Resources Limited Website.

The Company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcement and that all material assumptions and technical parameters underpinning the estimates in the relevant market announcement continue to apply and have not materially changed. The company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcement.

Mining study and metallurgical test work supports the development of the El Refugio-La Soledad resource with conventional underground mining methods indicated as being appropriate and with high gold-silver recovery to produce metal on-site with conventional processing.

Mithril is currently exploring in the Copalquin District to expand the resource footprint, demonstrating its multi-million-ounce gold and silver potential.

Mithril has an exclusive option to purchase 100% interest in the Copalquin mining concessions by paying US\$10M on or any time before 7 August 2026 (option has been extended by 3 years). Mithril has reached an agreement with the vendor for an extension of the payment date by a further 2 years (bringing the payment date to 7 August 2028).

## Competent Persons Statement

The information in this announcement that relates to metallurgical test results, mineral processing and project development and study work has been compiled by Mr John Skeet who is Mithril's CEO and Managing Director. Mr Skeet is a Fellow of the Australasian Institute of Mining and Metallurgy. This is a Recognised Professional Organisation (RPO) under the Joint Ore Reserves Committee (JORC) Code.

Mr Skeet has sufficient experience of relevance to the styles of mineralisation and the types of deposits under consideration, and to the activities undertaken, to qualify as a Competent Person as defined in the 2012 Edition of the Joint Ore Reserves Committee (JORC) Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr Skeet consents to the inclusion in this report of the matters based on information in the form and context in which it appears. The Australian Securities Exchange has not reviewed and does not accept responsibility for the accuracy or adequacy of this release.

The information in this announcement that relates to sampling techniques and data, exploration results and geological interpretation for Mithril's Mexican project, has been compiled by Mr Ricardo Rodriguez who is Mithril's Project Manager. Mr Rodriguez is a Member of the Australasian Institute of Mining and Metallurgy. This is a Recognised Professional Organisation (RPO) under the Joint Ore Reserves Committee (JORC) Code.

Mr Rodriguez has sufficient experience of relevance to the styles of mineralisation and the types of deposits under consideration, and to the activities undertaken, to qualify as a Competent Person as defined in the 2012 Edition of the Joint Ore Reserves Committee (JORC) Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr Rodriguez consents to the inclusion in this report of the matters based on information in the form and context in which it appears.

The information in this announcement that relates to Mineral Resources is reported by Mr Rodney Webster, Principal Geologist at AMC Consultants Pty Ltd (AMC), who is a Member of the Australasian Institute of Mining and Metallurgy. The report was peer reviewed by Andrew Proudman, Principal Consultant at AMC. Mr Webster is acting as the Competent Person, as defined in the 2012 Edition of the Joint Ore Reserves Committee (JORC) Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves, for the reporting of the Mineral Resource estimate. A site visit was carried out by Jose Olmedo a geological consultant with AMC, in September 2021 to observe the drilling, logging, sampling and assay database.

The Australian Securities Exchange has not reviewed and does not accept responsibility for the accuracy or adequacy of this release.

Figure 5 LiDAR hill shade image with the historic workings identified across the district and 2020-2022 highlight drill and channel sample results. Several new areas highlighted across the district for follow-up work.

This deposit type is common in the Sierra Madre Occidental of Mexico and is characterized by quartz veins and stockworks surrounded by haloes of argillic (illite/smectite) alteration. Veins have formed as both low-angle semi-continuous lenses parallel to the contact between granodiorite and andesite and as tabular veins in high-angle normal faults. Vein and breccia thickness has been observed up to 30 meters wide with average widths on the order of 3 to 5 meters. The overall strike length of the semi-continuous mineralized zone from El Gallo to Refugio, Cometa, Los Pinos, Los Reyes, La Montura to Constanca is almost 6 kilometres. The southern area from Apomal to San Manuel and to Las Brujas-El Peru provides additional exploration potential up to 5km.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |           |         |          |             |         |     |             |         |        |         |      |     |    |        |          |        |         |      |     |    |     |         |        |         |      |     |    |     |         |        |         |     |     |    |    |         |        |         |     |     |    |     |         |        |         |      |     |    |     |         |        |         |     |     |    |     |         |        |         |     |     |    |     |         |        |         |     |     |    |     |         |        |         |      |     |    |     |         |        |         |      |     |    |     |         |        |         |      |     |    |     |         |        |         |      |     |    |     |         |        |         |      |     |    |     |         |        |         |      |     |    |        |         |        |         |      |     |    |     |         |        |         |      |     |    |     |         |        |         |      |     |    |        |         |        |         |      |    |    |             |
