

Questcorp Mining Provides Update on Its Maiden Drill Program at La Union

Vancouver, British Columbia--(Newsfile Corp. - September 10, 2025) - **Questcorp Mining Inc. (CSE: QQQ) (OTCQB: QQCMF) (FSE: D910)** (the "**Company**" or "**Questcorp**") is pleased to provide an update on the Phase I drilling program at its La Union Gold and Silver project in northwest Sonora, Mexico. Drill holes have now been completed at two of the 4 target areas:

- The initial hole was completed beneath the historic Union Mine itself, intersecting the favourable carbonaceous Clemente and Caborca formations, including the microconglomeratic carbonate unit which hosted mineralization at the bottom of the past producing Union Mine.
- Drilling then shifted focus to the El Cobre Mine area and the Union Norte Mine area, testing vertical feeder zones above the Clemente formation dolomites and carbonaceous sandstones. Hole two intersected more quartzites than interpreted from the geophysics, with the quartzites carrying more extensive hematitic oxides, possibly indicative of oxide gold mineralization potentially related to sulfides which have been oxidized through supergene weathering.

Saf Dhillon, President and Chief Executive Officer, states: "The drilling is indicating oxidation is consistent with past mining and targets are coming along with a positive exploration drilling so far. The drilling is intersecting more quartzite than expected which is favorable for fracture-controlled mineralization. The Riverside operations team is progressing the current exploration program working with the surface rancher and the drilling company to efficiently progress a high-quality exploration program."

Drilling has now moved to the Famosa Target to progress exploration program. The Mexico Mining Ministry has approved many permits and are actively supporting the environmentally, socially conscious mineral exploration practices as a key aspect for the new Mexican government initiatives.
